

Garage Roofs Must Be Spark-Proof

Shingles or ordinary prepared roofings will not do. They are highly inflammable—dangerous! You need a roof upon which sparks drop dead—a roof that is fire-resisting, weatherproof, and wear-proof. We have it. This roofing is

We can heartily recommend RU-BER-OID. Our customers use it and know that it is permanent and

RU-BER-OID is not only fire-re-sisting, but it affords an all-year, every-sort-of-weather protection, repelling heat, cold and moisture. RU-BER-OIL far outlasts cheap imitations, because its long-wearing qualities are built in. In hundreds of instances RU-BER-OIL is still weatherproof after 20 years wear.

The U.S. Court of Appeals has recently enjoined imitators from using the word "Rubberoid or any similar name as the trade name or brand" of their roofing.

We sell the genuine,—with the "Ru-ber-oid Man" on the roll, as shown above. We have RU-BER-OIQ in slate gray and in distinctive Tile Red or Copper

Drop in and see Ru-aer-old when you are in this neighborhood.

H. H. WILLIAMS & SON WAUSEON, OHIO

I Am "Granny" Chamberlain

Everybody's friend when they have coughs and colds and their children have croup and whooping cough.

Most everyone knows me. I have been going from home to home for nearly fifty years-always welcome, too, for I never fail in their hour of

I have helped young mothers whose babies were choking with croup, and been the comfort of parents whose children tramp to school through the wet winter weather. Many a cold and attack of bronchitis I have warded off, and thousands I have helped through the anxious moments of whooping cough. I have come to the aid of mothers and fathers when they had colds and influenza, and have been a relief to old folks suffering from bronchitis and asthma.

I have had a most varied experience; I go everywhere-

among the rich and the poor, in cities and the country.

Now don't forget "Granny" Chamberlain! You will see me often now, for I am going to tell you of my experience and what can be done in your home with

JUNIOR CONTESTS

Fulton County Boys and Girls Who Are In Training To Become The Best Farmers In The Nation-Liberal Prizes and Valuable Trips to

Who will be the winners in the Boys' and Girls' Club Work conducted in the county through the co-operation of the county school superintendent and the fair association with the Agri-cultural College Extension Service of the Ohio State University? The total enrollment in all the clubs of the county is now 115; 46 are in the pig growing clubs, 36 in the poultry raising and 30 in the home making clubs, and 9 in the Daily Record Club.

During June and July a specialist from the University will visit the club

members giving them instruction in the canning of fruits and vegetables and the growing of livestock. At the county fair this fall the boys and girls in the pig growing clubs will exhibit their products and compete in the judging contests. The girls in the Home Making Clubs will exhibit bread canned fruit and vegetables. Through the summer all members of the clubs will receive instruction by bulletins

from the University.

Liberal prizes have been offered by the fair association for the winners in each of the club projects and the three boys who make the highest record will be given a free trip by The Ohio State University to Farmers' Week at Columbus next year. The champion girl of the county will re-

ceive a week of free instruction at the College of Agriculture, The club work is the result of a nation-wide movement by the United States Department of Agriculture in interesting farm boys and girls in be-coming the best farmers of the nation. In many states the girls have canned large amounts of garden products which were formally wasted and boys have shown that they can raise pork cheaper than their fathers.

the soil. We know that ammonia makes a quick start and a large vegetative growth; that phosphoric acid hastens maturity and puts the plumpness into the grain, and that it is potash that puts the stiffness in the straw. Are the stalks short and spindling? Do the heads fill out, and are the grains and all your neighbors' needs as well and it's especially

GOOD COAL that we are offering you, Quality.

The soil. We know that ammonia makes a quick start and a large vegetative growth; that phosphoric acid hastens maturity and puts the plumpness into the plumpness into the grain, and that it is potash that puts the stiffness in the straw. Are the stalks short and spindling? Do the heads fill out, and are the grains plump? Does the straw lodge, or fall down? If these things happen it is a mute appeal from your land that it needs a properly balanced ration in order to carry through to maturity and a heavy yield the crops that are sown on it.

The soil. We know that ammonia makes a quick start and a large vegetative growth; that phosphoric acid hastens that the plumpness into the plumpness into the plumpness into the products more profitably than usual, according to Prof. Wendell Paddock of the Horticulture Department, Onio State University. Recent cold waves in that district have caused unusual losses. Ohio fruitmen can fruther improve the quality of their products by giving more careful attention to spraying and thinning this year. Pruning can still be done without in-

ammonia in porportion to the amounts of available phosphoric acid and potash. Very few of us indeed would ment for sprains, bruises and rheusay that an old feed lot would need fertilizer, but this is just what it does need, in order to balance the supply of plantfood and in this way enable it to put forty bushels of wheat on the forty bushels straw which it grows. The same thing is true of heavy rich soils, and of course where Chamberlair's Liniment affords. For It pays to buy good bicycles and tires.

Ivan McKellip, who organizes the associations through the Agricultural College Extension Service of the Ohio State University reports that 20 organizations are now in operation with an average of 330 cows in each. In several of the associations the cost of p. oducing butter fat has been reduced

Cleaning the Crack

Everybody used to be contented believing the world to be flat.

It takes a long time for human beings to think of things.

No one ever thought to clean out the crack which you have no doubt noticed on the flat side of every coffee bean.

And yet it is the bitter skin enfolded

in the crack and around the coffee bean that makes much coffee unpleasant to the taste.

When you grind your own coffee, you grind also the bitter skin and the still more bitter contents of the crack.

Result, more poor coffee.

Red, White and Blue Coffee is palatable, appetitizing and dependable because the crack is cleaned.

Your grocer has it at 25c a pound.
